Welcome

to the Inaugural Future Facing Commodities Conference - the premier Asian investment showcase connecting Resources and Technology with ESG and Sustainability.

Clean energy technologies require far more lithium, nickel, copper, cobalt, and other minerals than their fossil-fuel counterparts and a supply crunch is looming.

The World Bank has predicted the demand for critical minerals in renewable and clean energy technologies to increase 500% by 2050.

The global rise of electric vehicles is also predicted to increase demand in battery minerals.

Companies attending the Future Facing Commodities Conference will be central to meeting this demand as the world transitions to offset the impact of climate change.

The Conference will bring together global upstream, downstream and technology companies relevant to this thematic with investors looking to deploy capital at one major event in Asia's financial hub.

Enjoy two days of presentations, six themed panel sessions with industry experts from all corners of the world sharing their thoughts on critical minerals and two very interesting 'fireside' chats.

Join us for sumptuous Singaporean Cuisine and enjoy a drink while catching up with old friends and making new ones at the three cocktail parties.

Welcome to Singapore!

ESG Considerations in Public Mineral Reporting

Context: Environmental, Social and Governance (ESG) issues have become a defining feature in the marketplace to differentiate preferred investments.

With the sustainability reporting landscape anticipated to continue to evolve exponentially, it is now imperative to rapidly develop the approach taken by mineral companies to accommodate growing ESG requirements in the reporting of Mineral Resources and Mineral Reserves (MRMR).

In this workshop, K2fly will explore the challenges associated with public reporting, opening the discussion on recent failures and risks, to ultimately look at ways to attribute more accountability and governance over the reporting process.
